DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-20, drawn to a low noise solid state thermostat with a comparator for fault detection, classified in class 236, subclass 94.
- II. Claims 21-23, drawn to method for coupling a heat generating device to a heat sink, classified in class 361, subclass 688.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as wherein a heat generating device is not coupled to a heat sink in the manner recited in Invention II. Invention II has separate utility such as in a method of coupling wherein it is not applied to a low noise solid state thermostat as recited in Invention I. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/754,152 Page 3
